## Woodwright® Sliding Sash Window – the Eco friendly choice

The Woodwright® made to measure sliding sash window from Andersen is proving to be the natural eco friendly choice for architects and builders wanting to combine traditional design and superior performance with a commitment to the environment.

Woodwright® is the first of a new generation of wood based windows to incorporate Fibrex®, a highly sustainable composite material made from 50% recycled waste.

A patented blend of reclaimed pine wood fibre bonded and a specially formulated thermoplastic polymer, this revolutionary new material delivers the strength, rigidity and thermal performance equal to wood, a stability superior to wood and even has the appearance of natural wood.
