Black Millwork goes bi-fold

BLACK MILLWORK has extended its range to include bi-fold doors, available in a variety of materials and finishes.

The doors are available fully finished in standard white, in various RAL colours, or stained/lacquered. All units have been tested to EN1279 and fully glazed with Pilkington Toughened Low E, featuring an upgraded Thermix spacer and argon fill.

The aluminium option benefits from two very narrow profiles of

70 mm and 45 mm, and timber options offer between 70 mm and 115 mm, meaning larger glass panels are possible.
