

## ***Making a grand entrance***

Black Millwork has extended its sizeable portfolio to include its latest launch: high specification 68mm engineered timber entrance doors that meet the European Standards.

Black Millwork says its range of high quality timber entrance doors offer the best in terms of strength and durability, as well as enjoying the aesthetic

benefits that timber offers. The enhanced range boasts thicknesses of up to 68mm to fully meet with European Standards, and provides improved thermal efficiencies. Additional insulated panels have also been incorporated into the wide range of door styles available, ensuring supreme performance.

The full range features an array of doorset designs to suit any property or dwelling, from traditional and period styles to more contemporary, urban options depending on the desired look and character. With adjustable hinges fitted as standard, flush doors, varieties with panels or glass inserts – the possibilities are endless for any specifier.

All Black Millwork branded windows are manufactured from high-quality, knot-free engineered oak and engineered Baltic pine, which have been manufactured to ensure defect-free timber and eliminate the problems previously associated with the performance of wood in varying temperatures and humidities. To facilitate design flexibility, Black Millwork doors can be finished with any RAL colour, utilising a Scandinavian Grade Paint system.
